General Description

The Delta 47 is a wideband antenna that operates efficiently across a frequency range of 600 MHz to 5600 MHz. Boasting exceptional radiation efficiency, low VSWR, and a gain of 3-5 dBi, this antenna ensures robust omnidirectional coverage across the most widely-used 5G NR and 4G LTE bands globally.

As an omnidirectional monopole antenna, the Delta 47 provides consistent reception in all directions, while its ground plane independence offers greater flexibility in mounting locations.

Terminated with an SMA male connector, it is ideally suited to applications requiring a simple, cable free set up. The knuckle design allows the antenna to be positioned to best take advantage of the incoming signal, allowing straight, 45° and 90° positions along with 360° rotation.

NOTE: For each frequency band, Siretta provides a traffic light indication to show the suitability of the antenna for use at that frequency band. Determination of exactly what makes an antenna good or bad at any frequency is subjective.

The view presented is that of Siretta's engineering team having taken into account the efficiency and VSWR measurements. The end user is advised to use their own criteria and/or testing to confirm suitability.

● Likely to be unsuitable

NOTE: For each frequency band, Siretta provides a traffic light indication to show the suitability of the antenna for use at that frequency band. Determination of exactly what makes an antenna good or bad at any frequency is subjective.

The view presented is that of Siretta's engineering team having taken into account the efficiency and VSWR measurements. The end user is advised to use their own criteria and/or testing to confirm suitability.
